

18th July 2011

Kinetic Electrical Ltd
305 Alexandra Street
Hastings 4122
HAWKES BAY

To Whom It May Concern,

Kinetic Electrical Hawkes Bay was engaged by Downer New Zealand Ltd to undertake the electrical works for the Otaki Wastewater Treatment Plant (WWTP) Sludge Treatment Upgrade. The project was awarded to Kinetic 13th April 2011 with the work completed 7th July 2011.

As the work was undertaken on an operational treatment plant the timing of certain aspects of the upgrade were critical to ensure minimal disruption to the plant's operation. The time critical parts of this contract included:

- Upgrading the mains supply to new MCC with minimal plant down time
- Migration of the existing circuit to the new MCC whilst keeping the plant operational
- Resolving unforeseen issues arising from the combination of old and new plant.

Kinetic Electrical completed this project on time and within budget. The quality and workmanship was of a high standard and all Health & Safety and Quality Assurance requirements were met and/or exceeded.

Regan Trotter undertook the role of site project manager for Kinetic. Regan worked closely with his crew of electricians to ensure critical timelines were achieved. Regan maintained a professional and friendly attitude when dealing with all parties on site; including myself, the client (Kapiti Coast District Council) and the client's engineers (BTO).

Regards

Simon Mason
Project Manager
