To whom it may concern

## **Kinetic Electrical**

The construction of the Gisborne Wastewater Treatment Plant was a critical construction project for the Company to deliver in this sector of infrastructure work. As with all construction projects with a high M&E component, the 'tail end Charlies' are invariably the electrical control and system integration suppliers. Employing the right contractor for this work could not be taken lightly and we undertook a thorough review before engaging Kinetic Electrical Hawke's Bay. We had never worked with them before but they came highly recommended from one of our electrical suppliers. In subsequent meetings, they presented themselves in a very professional manner, knew what they were doing and what they were letting them selves into which gave us the confidence to proceed.

Kinetic Electrical Hawke's Bay was engaged by HEB Construction Ltd to undertake the electrical and control portion of the Gisborne Waste Water Plant and install the HMI interface.

The project had many critical aspects including:-

- Installation of wet well monitoring components and instrumentation.
- System integration
- MCC panelwork
- Install of significant cable ladder for supply cables to electric motors and control devices.
- Meeting and beating the tight 60week time frame for the completion of the project which involved the whole team working long hours. Requests for additional resources were always met as the pressure came on for us to commission the plant in the run upto Christmas 2010.
- Install of lightning protection and exothermic earthing for plant protection.

Kinetic Electrical completed this project on time and within budget, the quality and workmanship was of a high standard with all Health and Safety requirements met and exceeded.

Shane Heaton was the Project Manager of this Project, and with the support of installation manager Jody Raggett ensured that critical timelines were achieved and client was satisfied with completed product.

Kinetic Electrical is a very professional company which maintains a high standard of work onsite and we would not hesitate to use them again on a similar project.

Regards
